

Final Examination 2023

# NSW Year 11 Mathematics Standard

Solutions and Marking Guidelines

Answer and explanation	Syllabus content, outcomes and targeted performance bands
<p><b>Question 6</b>      <b>A</b></p> <p>The total amount of tax Claire owes to the Australian Taxation Office is the sum of the income tax and Medicare levy. PAYG is the amount of money that Claire's employer has already paid to the Australian Taxation Office on her behalf. Finding the difference between the total amount of tax and the PAYG paid gives:</p> $(\$5472 + \$465) - \$5612 = \$325$ <p>As the amount of tax due is greater than the amount of PAYG paid, Claire still owes the Australian Taxation Office \$325.</p>	<p>MS–F1 Money Matters MS11–5                      Bands 2–3</p>
<p><b>Question 7</b>      <b>C</b></p> <p>Given that the rectangular picture frame has a length twice its width, <math>l = 2w</math>. The perimeter is 48 cm, so <math>P = 48</math>. Substituting these values into the formula gives:</p> $P = 2l + 2w$ $48 = 2 \times 2w + 2w$ $48 = 4w + 2w$ $48 = 6w$ $w = 8$ <p>Substituting <math>w = 8</math> into <math>l = 2w</math> to find the length of the frame gives:</p> $l = 2w$ $= 2 \times 8$ $= 16 \text{ cm}$	<p>MS–A1 Formulae and Equations MS11–1                      Bands 2–3</p>
<p><b>Question 8</b>      <b>D</b></p> <p>Andy's wage can be calculated by finding the difference between the 'total earned' from any two rows of the table; for example, between 4:00 pm and 6:00 pm, he earned <math>\\$72 - \\$48 = \\$24</math>. As this occurred over two hours, it equates to an hourly wage of <math>\frac{24}{2} = \\$12</math>.</p> <p>Byron's wage can be calculated using the equation <math>p = 24t</math>, which is a linear relationship with a gradient of 24. In this case, the gradient represents the amount of money paid for each hour worked. This means Byron's hourly wage is \$24.</p> <p>Therefore, Andy's hourly wage is half of Byron's hourly wage.</p>	<p>MS–A2 Linear Relationships MS11–1                      Bands 3–4</p>

Answer and explanation	Syllabus content, outcomes and targeted performance bands
<p><b>Question 9 B</b></p> <p>A cube is made up of six square faces. If each square has the side length <math>s</math>, the surface area of the cube can be represented by the equation <math>SA = 6s^2</math>. Substituting <math>SA = 121.5</math> gives:</p> $121.5 = 6s^2$ $20.25 = s^2$ $s = \sqrt{20.25}$ $s = 4.5 \text{ m}$	<p>MS–M1 Applications of Measurement MS11–4</p> <p style="text-align: right;">Bands 3–4</p>
<p><b>Question 10 C</b></p> <p>Finding the 4-day mean gives:</p> $\frac{126 + 113 + 130 + 135}{4} = 126$ <p>Finding the 5-day mean gives:</p> $\frac{126 + 113 + 130 + 135 + 116}{5} = 124$ <p>Therefore, the 5-day mean has decreased by 2.</p>	<p>MS–S1 Data Analysis MS11–7</p> <p style="text-align: right;">Bands 3–4</p>
<p><b>Question 11 C</b></p> <p>The graph line has a negative gradient. Two points that lie on the line are <math>(0, 7)</math> and <math>(2, 4)</math>.</p> $\text{gradient} = \frac{\text{rise}}{\text{run}}$ $= -\frac{3}{2}$	<p>MS–A2 Linear Relationships MS11–2</p> <p style="text-align: right;">Bands 3–4</p>
<p><b>Question 12 D</b></p> <p>The principal is <math>x</math>.</p> <p>The interest rate is 4% or 0.04.</p> <p>The term of the loan is 18 months or 1.5 years.</p> <p>Substituting these values into the simple interest formula gives:</p> $I = Prm$ $= x \times 0.04 \times 1.5$ <p>The total amount Luka owes is the principal plus the interest charged by the lender.</p> <p>Therefore, the total amount owed is <math>\\$(x + (x \times 0.04 \times 1.5))</math>.</p>	<p>MS–F1 Money Matters MS11–5</p> <p style="text-align: right;">Bands 4–5</p>

Answer and explanation	Syllabus content, outcomes and targeted performance bands
<p><b>Question 13      B</b></p> <p>If the pyramid's base is a square with edges measuring <math>b</math> units, <math>A = b^2</math>.</p> <p>Substituting <math>b = 2h</math> gives:</p> $A = (2h)^2$ $= 2h \times 2h$ $= 4h^2$ <p>Substituting <math>A = 4h^2</math> into <math>V = \frac{1}{3}Ah</math> gives:</p> $V = \frac{1}{3} \times 4h^2 \times h$ $= \frac{4}{3}h^3$	<p>MS–A1 Formulae and Equations MS11–1                                      Bands 5–6</p>
<p><b>Question 14      B</b></p> <p>Using Pythagoras' theorem, the hypotenuse of the right-angled triangle is <math>\sqrt{6^2 + 8^2} = 10</math>.</p> <p>In this instance, the hypotenuse of the triangle is also the diameter of the circle. Therefore:</p> $c = \pi d$ $= 10\pi$ $= 31.4159$ $\approx 31 \text{ cm}$	<p>MS–M1 Applications of Measurement MS11–3                                      Bands 5–6</p>

**Answer and explanation****Syllabus content, outcomes and targeted performance bands****Question 15**      **A**

An array can be used to visualise the sample space. The outcomes that correspond to each option are shown below.

	1	2	3	4	5	6
1	C	B	D	A, B	–	B
2	B	C	A, B	D	B	–
3	D	A, B	C	B	D	B
4	A, B	D	B	C	B	D
5	–	B	D	B	C	B
6	B	–	B	D	B	C

Finding the probability of option **A** gives:

$$\begin{aligned} P(\text{sum of 5}) &= \frac{4}{36} \\ &= \frac{1}{9} \\ &= 11.1\% \end{aligned}$$

Finding the probability of option **B** gives:

$$\begin{aligned} P(\text{one odd, one even}) &= \frac{18}{36} \\ &= \frac{1}{2} \\ &= 50\% \end{aligned}$$

Finding the probability of option **C** gives:

$$\begin{aligned} P(\text{same number}) &= \frac{6}{36} \\ &= \frac{1}{6} \\ &= 16.6\% \end{aligned}$$

Finding the probability of option **D** gives:

$$\begin{aligned} P(\text{differ by 2}) &= \frac{8}{36} \\ &= \frac{2}{9} \\ &= 22.2\% \end{aligned}$$

<b>Question 31</b>											
<p>(a) The following table shows the implications of each piece of information provided.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;"><i>Information</i></th> <th style="text-align: center;"><i>Implication</i></th> </tr> </thead> <tbody> <tr> <td>The probability of spinning a number less than 8 is 1.</td> <td>Only numbers 1 to 7 can appear on the spinner.</td> </tr> <tr> <td>The probability of spinning a multiple of 3 is <math>\frac{1}{3}</math>.</td> <td>Two sectors on the spinner are labelled 3 and 6.</td> </tr> <tr> <td>The probability of spinning a multiple of 4 is <math>\frac{1}{6}</math>.</td> <td>One sector on the spinner is a 4.</td> </tr> <tr> <td>The probability of spinning an odd number is <math>\frac{2}{3}</math>.</td> <td>Four sectors on the spinner are labelled 1, 3, 5 and 7.</td> </tr> </tbody> </table> <p>Therefore, the completed spinner is:</p>  <p><i>Note: Accept spinners that place the numbers in a different order. Responses are not required to show working in order to obtain full marks.</i></p>	<i>Information</i>	<i>Implication</i>	The probability of spinning a number less than 8 is 1.	Only numbers 1 to 7 can appear on the spinner.	The probability of spinning a multiple of 3 is $\frac{1}{3}$ .	Two sectors on the spinner are labelled 3 and 6.	The probability of spinning a multiple of 4 is $\frac{1}{6}$ .	One sector on the spinner is a 4.	The probability of spinning an odd number is $\frac{2}{3}$ .	Four sectors on the spinner are labelled 1, 3, 5 and 7.	<p>MS–S2 Relative Frequency and Probability MS11–8 Bands 4–5</p> <ul style="list-style-type: none"> <li>Provides the correct solution . . . . . 2</li> </ul> <hr/> <ul style="list-style-type: none"> <li>Creates a spinner that satisfies THREE pieces of information . . . . . 1</li> </ul>
<i>Information</i>	<i>Implication</i>										
The probability of spinning a number less than 8 is 1.	Only numbers 1 to 7 can appear on the spinner.										
The probability of spinning a multiple of 3 is $\frac{1}{3}$ .	Two sectors on the spinner are labelled 3 and 6.										
The probability of spinning a multiple of 4 is $\frac{1}{6}$ .	One sector on the spinner is a 4.										
The probability of spinning an odd number is $\frac{2}{3}$ .	Four sectors on the spinner are labelled 1, 3, 5 and 7.										
<p>(b) The relative frequency of spinning a multiple of 4 or an odd number is <math>\frac{1}{6} + \frac{2}{3} = \frac{5}{6}</math>.</p> <p>expected frequency = relative frequency × number of trials</p> $120 = \frac{5}{6} \times n$ $n = \frac{120}{\frac{5}{6}}$ $= 144$	<p>MS–S2 Relative Frequency and Probability MS11–8 Bands 5–6</p> <ul style="list-style-type: none"> <li>Provides the correct solution . . . . . 1</li> </ul>
