

Question 7

For each of the following:

State whether the statement is true (T), or false (F), and explain your answer.

| Statement | T / F | Explanation |
|---|-------|-------------|
| a. In a gas at fixed pressure, temperature and volume all gas particles will move at the same velocity. | | |
| b. The density of ice and water at 0°C and at atmospheric pressure is the same. | | |
| c. In a redox reaction there is always an oxidation half reaction and a reduction half reaction. | | |
| d. Mixing together solutions of two different salts will always result in the formation of a precipitate. | | |
| e. Stoichiometric calculations are carried out using mole ratios of substances rather than mass ratios. | | |

1 + 1 + 1 + 1 + 1 = 5 marks

STUDENT: _____ TEACHER: _____

CSE TEST – OCTOBER 2009**YEAR 11 – CHEMISTRY****Written test 2**

Reading time: 15 minutes
 Writing time: 1 hour 30 minutes

QUESTION AND ANSWER BOOK**Structure of book**

| Section | Number of questions | Number of questions to be answered | Number of marks | Suggested times (minutes) |
|---------|---------------------|------------------------------------|-----------------|---------------------------|
| A | 20 | 20 | 20 | 30 |
| B | 7 | 7 | 55 | 60 |
| | | Total 75 | | 90 |

- Students are permitted to bring into the test room: pens, pencils, highlighters, erasers, sharpeners, rulers, an approved graphics calculator (memory cleared) and/or one scientific calculator.
- Students are NOT permitted to bring into the test room: blank sheets of paper and/or white out liquid/tape.

Materials

- Question and answer book of 16 pages with an accompanying data sheet.
- Detachable answer sheet for multiple choice questions. You may remove this during reading time.

Instructions

- Write your name in the space provided above and on the multiple choice answer sheet.
- All written responses must be in English.

At the end of the test

- Place the answer sheet for multiple choice questions inside the front cover of this book.

Students are NOT permitted to bring mobile phones and/or other electronic communication devices into the test room.

Total 9 marks

1 + 1 + 1 + 1 = 4 marks

c. State one reason why carbon dioxide cannot be successfully prepared using the method shown for oxygen.

1 mark

d. State how the following Principles of Green Chemistry can be applied to the preparation of substances in a school laboratory.

i. Preventing waste production.

ii. Consuming the minimum amount of energy.

iii. Minimising the possibility of accidents.

iv. Achieving maximum atom efficiency.

- d. What mass of nitrogen(IV) oxide occupies the same volume at SLC as the mass of NO produced in a?
-
-
-
-

2 marks

Total 9 marks

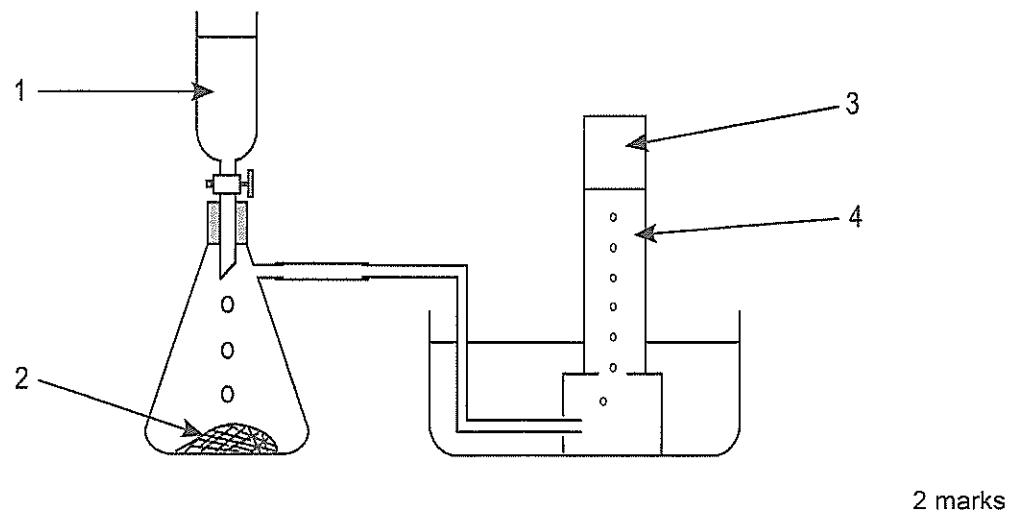

Question 6

- a. Write balanced equations for suitable reactions for the laboratory preparation of oxygen and of carbon dioxide. State the reaction conditions.

| | |
|----------------|--|
| Oxygen | |
| Carbon dioxide | |

2 marks

- b. The diagram shows one method for the laboratory preparation of oxygen.
Label the diagram as indicated by the numbers 1 – 4.

2 marks

SECTION A – Multiple choice questions**Instructions for Section A**

Answer all questions in pencil on the answer sheet provided for multiple choice questions.

Choose the response that is correct or that best answers the question.

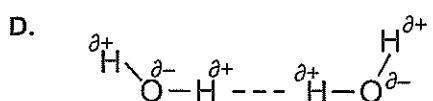

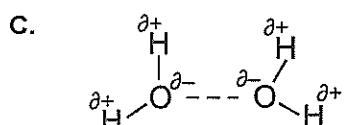

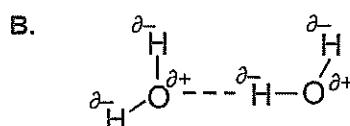

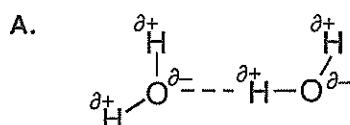

A correct answer scores 1, an incorrect answer scores 0. Marks will not be deducted for incorrect answers.

No marks will be given if more than one answer is completed for any question.

Question 1

Which one of the following is the most accurate representation of the chemical bonding within and between water molecules? (Dispersion forces are not included.)

— indicates a covalent bond - - - indicates a hydrogen bond.

**Question 2**

During which one of the following processes, that occur in the natural water cycle, is energy absorbed?

- A. The temperature of liquid water decreases.
- B. Tiny droplets of water coalesce to form larger drops.
- C. Liquid water is converted to steam.
- D. The temperature of ice falls below its freezing point.

Question 3

If the same amount of energy is absorbed by equal masses of water and of copper the

- A. temperatures of both the water and the copper will increase by the same amount.
- B. temperature of the water will increase more than the temperature of the copper.
- C. temperature of the copper will increase more than the temperature of the water.
- D. temperatures of both water and copper will remain constant but their volumes will increase.

D. i and ii only.

C. iii and iv only.

B. iii only.

A. i, ii and iv only.

1 mark

c. Determine which reactant is in excess, and by what mass.

13

4

Question 4

When the molecular compound, $\text{CH}_3\text{CH}_2\text{OH}$, is added to water, the ethanol

D. dissociates into ions and dissociatives.

C. is immiscible with water and forms a separate layer.

B. forms ions by reaction with water molecules and dissociatives.

A. forms hydrogen bonds to water molecules and dissociatives.

Question 5

Question 5

a. What volume of NO gas is produced at SLC when 20.0 g of copper reacts with excess nitric acid?

The concentration of K^+ ions in this solution expressed as ppm (parts per million) and as molarity will be An aqueous solution of potassium chloride, KCl, contains 2.70 g of potassium ions per 500 mL of solution.

Copper reacts with excess 8.0 M nitric acid at SLC producing nitrogen(II) oxide gas according to the following equation.

Total 6 marks

Question 6

Addition of which one of the following reactants to a solution of sodium sulfate would result in the formation of a precipitate?

b. The volume of NO obtained increases by 20% as a result of a temperature increase. Calculate the temperature in °C which would cause this volume increase if the pressure remains the same.

D. Ammonium carbonate solution.

C. Barium nitrate solution.

B. Copper(II) chloride solution.

A. Potassium sulfide solution.

3 marks

Question 7

In which of the following reactions does a water molecule act as a base?

c. Write a balanced equation for the reaction of NO with oxygen gas to produce nitrogen(V) oxide gas.

3 marks

Question 8

ii. What is the pH of the solution at 25°C?

1 mark

d. Dilution of 5.0 mL of 0.50 M hydrochloric acid (HCl) is slowly carried out with 95 mL of water.

What is the pH of the diluted solution at 25°C?

2 marks

e. Why is it not possible to calculate the pH of oxalic acid directly from its molarity?

1 mark

Total 11 marks

Question 4

60 mL of a 2.5 M solution of lead(II) nitrate is mixed with 60 mL of a 2.0 M solution of potassium iodide and a precipitate of lead(II) iodide forms.

a. Write a balanced equation for the precipitation reaction.

1 mark

b. Calculate the amount in moles of each reactant.

2 marks

Question 8

The hydronium, H_3O^+ , and hydroxide, OH^- , ion concentrations, in mol L⁻¹, of acid rain at 25°C with a pH of 5.8 are

- A. $[\text{H}_3\text{O}^+] = 5.8$ and $[\text{OH}^-] = 8.2$.
- B. $[\text{H}_3\text{O}^+] = 10^{-5.8}$ and $[\text{OH}^-] = 10^{-8.2}$.
- C. $[\text{H}_3\text{O}^+] = 10^{5.8}$ and $[\text{OH}^-] = 10^{8.2}$.
- D. $[\text{H}_3\text{O}^+] = 10^{-8.2}$ and $[\text{OH}^-] = 10^{-5.8}$.

Question 9

Metal X reacts spontaneously with metal Y in a displacement reaction as shown in the equation

Which one of the following half equations represents the half reaction in which oxidation occurs?

- A. $\text{X}_{(\text{s})} + \text{e}^- \rightarrow \text{X}^+_{(\text{aq})}$
- B. $\text{X}_{(\text{s})} \rightarrow \text{X}^+_{(\text{aq})} + \text{e}^-$
- C. $\text{Y}^+_{(\text{aq})} \rightarrow \text{Y}_{(\text{s})} + \text{e}^-$
- D. $\text{Y}^+_{(\text{aq})} + \text{e}^- \rightarrow \text{Y}_{(\text{s})}$

Question 10

The following equation summarises the reactions causing the corrosion of iron. Which one of the following statements regarding corrosion is **incorrect**?

- A. In the presence of water, iron atoms on the surface of the iron are oxidised by oxygen from air.
- B. Oxygen is reduced at the anodic areas of the iron surface.
- C. Electrons travel through the iron from anode to cathode.
- D. Iron(II) hydroxide is formed during the corrosion process which is further oxidised to iron (III) hydroxide.

Question 11

What mass of silver is precipitated when 5.0 g of copper metal is added to an excess of silver nitrate solution according to the equation below?

- A. 0.16 g
- B. 8.5 g.
- C. 10 g.
- D. 17 g.

- A. one more electron than it has protons.
 B. one less electron than it has protons.
 C. an incomplete outer electron shell.
 D. an unpaired electron in its outer shell.

Question 15 A free radical is best described as an atom or molecular fragment which has oxygen and hydroxyl free radicals.

Chemical species called free radicals are involved in the formation of photochemical smog. Examples are

- i. What are the H_3O^+ and OH^- ion concentrations in mol L^{-1} of this solution?
 ii. A solution of barium hydroxide has a concentration of 0.050 M
 iii. Ozone occurs only in the stratosphere.
 iv. Ozone is present in photochemical smog.

Question 14 Which one of the following statements about ozone is incorrect?

- A. Ozone, O_3 , and oxygen, O_2 , are allotropes of oxygen.
 B. Ozone is able to absorb ultra violet radiation.
 C. Ozone occurs only in the stratosphere.
 D. Ozone is present in photochemical smog.

Question 3 Two nitrogen containing species in which nitrogen has the same oxidation number are

a. Write balanced equations for the successive ionisation reactions of this acid.
 b. Sulfuric acid, H_2SO_4 , is a strong diprotic acid. If 0.50 M solutions of $\text{H}_2\text{C}_2\text{O}_4$ and H_2SO_4 are compared, which one would have

- c. NH_3 and HNO_2 .
 d. NH_4^+ and N_2 .
 e. HNO_2 and HNO_3 .

Question 13 The following equations represent some of the redox chemical reactions occurring in the Nitrogen Cycle.

- f. Give a reason for your answer.
 g. Would you expect the mass loss from electrode Q to be the same as the mass increase of electrode R?
 h. 100 mL.

Question 12 The volume of 1.8 M lithium hydroxide solution required to exactly neutralise 100 mL of 0.75 M sulfuric acid is closest to

a. 27 mL.
 b. 42 mL.
 c. 83 mL.
 d. 100 mL.

Question 11 In the box on the diagram draw an arrow to indicate the direction of electron flow in the external circuit.

- d. At 30°C, one mole of $Z(NO_3)_2$ will just dissolve in 543 g of water. Deduce the relative atomic mass of Z and name the element.
-
-
-

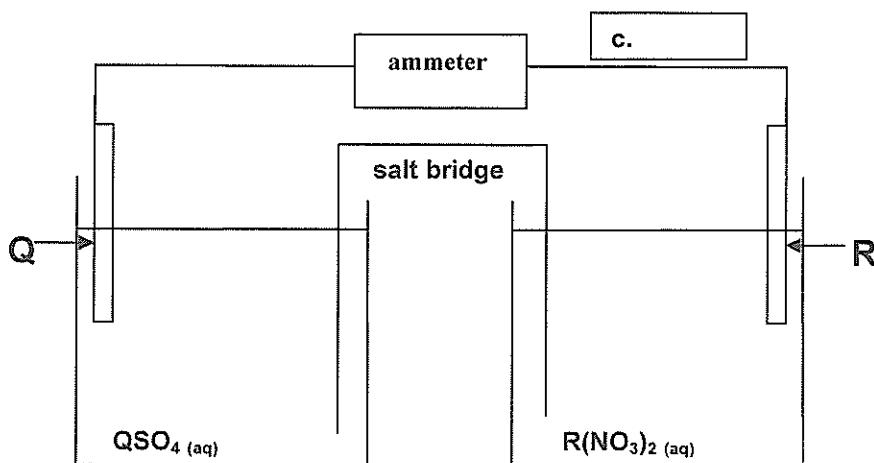

Name of Element:

3 marks

Total 9 marks

Question 2

A galvanic cell is set up as shown in the following diagram. Q and R are different metal elements which make up the electrodes, and each half cell contains an aqueous electrolyte as shown.

During operation of the galvanic cell it is found that electrode R increases in mass and electrode Q decreases in mass.

- a. Write oxidation and reduction half equations for the reactions at the electrodes.

Half equation in which the metal is oxidised

Half equation in which the metal is reduced

1 + 1 = 2 marks

- b. Write the overall cell reaction, including symbols of state.

1 mark

Question 16

A balloon is inflated until the air pressure inside it is 102.8 kPa. The air pressure outside the balloon is 101.3 kPa. If a hole is made in the balloon, when air movement has stopped the air pressure inside the balloon will be

- A. 102.8 kPa.
- B. 101.3 kPa.
- C. 1.5 kPa.
- D. 0 kPa.

Question 17

7.0 g of chlorine gas and 7.0 g of argon gas are placed in separate sealed containers which have the same volume and are maintained at the same temperature.

The two gas samples have

- A. the same number of particles and exert the same pressure.
- B. the same average particle velocity and exert different pressures.
- C. different average kinetic energy and exert the same pressure.
- D. the same average kinetic energy and exert different pressures.

Question 18

In which one of the following lists are all gases naturally occurring and Greenhouse gases?

- A. H_2O , CH_4 , CO_2 .
- B. CFCs, N_2O , CH_4 .
- C. SF_6 , H_2O , CO_2 .
- D. PFCs, N_2O , SF_6 .

Question 19

Ethyne (acetylene) burns in excess oxygen to produce carbon dioxide and water.

750 mL of ethyne is reacted completely in excess oxygen and the volume of gases produced is measured at various temperatures. Given that the sublimation temperature of carbon dioxide is $-78^\circ C$, and the boiling temperature of water is $100^\circ C$, what volume of gases is produced when measured at the temperatures listed below?

| | above $100^\circ C$ | at SLC | below $-78^\circ C$ |
|----|---------------------|---------|---------------------|
| A. | 2250 mL | 2250 mL | 1500 mL |
| B. | 1500 mL | 750 mL | 0 mL |
| C. | 2250 mL | 1500 mL | 750 mL |
| D. | 2250 mL | 1500 mL | 0 mL |

SECTION B – Short answer questions

Rain water is naturally slightly acidic. The gas which is responsible for this natural acidity is

Answer all questions in the spaces provided.

- A.** sulfur dioxide.

 - give simplified answers with an appropriate number of significant figures to all numerical questions;
 - unsimplified answers will not be given full marks.

B. carbon dioxide.

 - show all working in your answers to numerical questions. No credit will be given for an incorrect answer unless it is accompanied by details of the working.

C. nitrogen dioxide.

 - make sure chemical equations are balanced and that the formulas for individual substances include an indication of state; for example $H_2(g)$; $NaCl(s)$.

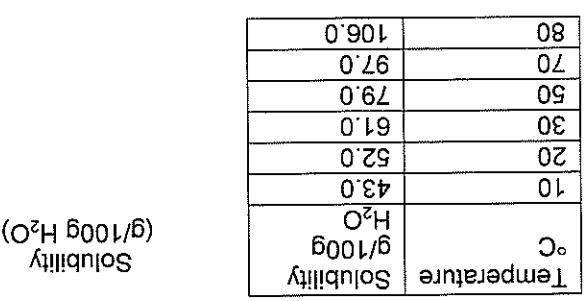

D. hydrogen sulphide.

a. Use the information in the table to plot a solubility curve on the graph for a soluble salt whose formula is $Z(NO_3)_2$ where Z is a metal.

Question 1

a. Use the information in the table to plot a solubility curve on the graph for a soluble salt whose formula is $Z(NO_3)_2$ where Z is a metal.

END OF SECTION A

b. What is the maximum mass of $Z(NO_3)_2$ that will dissolve in 100 g of water at $55^\circ C$? _____ 1 mark

Use the graph drawn in part a. to answer parts b., c. and d. of this question.

Temperature ($^\circ C$)

c. When a saturated solution of $Z(NO_3)_2$ dissolved in 90 g of water at 75°C cools to 20°C, what is the mass of solid which crystallises from solution?

3 marks

| | | | | |
|-------------------------------|-------------------------------|--------------------------------|------------------------------------|-----------------------------------|
| 1 H 1.0 Hydrogen | 3 Li 6.9 Lithium | 4 Be 9.0 Beryllium | | |
